

2. Question-Answer

Note

1. This previous response from server include all the questions need to be answered.
2. All questions marked as required must be answered with valid values by sending a request to the server.
3. Before sending the answers, all values need to be validated using the validating properties if provided.
4. After the request has been sent, if got response. The response should be carefully checked.
check the value of status in step[0].
if it is "FAILED", it means the current questions are not properly answered. Then we need to check the value of step[0]-error to see whether we can go on with the current step. If we can we need resend the request with valid answer.
if it is "ACTIVE", it means we enter another step, we need to check the step[0]-stepName to see if need go on with FareSelection step or another Question-Answer step.
If it is "DONE", it means we have finished the current booking.
